A patient with a chronic cough was unresponsive to antibiotics. On lab exam of sputum fungal hyphae were seen. The doctor prescribed Ketoconazole because it inhibits the synthesis of an essential component of fungal cell membranes. Carbohydrates A Chitin Ergosterol D Polysaccharide Peptidoglycan E A 40 years male patient is admitted in the hospital with fever and increased frequency of micturition. His urine was collected and sent for culture. Based on your knowledge of bacterial growth, what is the generation time of Escherichia coli? 10 minutes 15 minutes 20 minutes D 1 hour E 24 hours A man presented with lesions having an inflamed circular border containing papules and vesicles surrounding a clear area of relatively normal skin; on the back. What is the most probable cause? on B Bacterial skin infections Tinea Capitis D Tinea Versicolor E Viral infection A 24-year -old boy presents to the hospital with blood in his urine. Microscopic examination of his urine reveals the presence of eggs with terminal spines. In the interview, he admits that he has been working on his family's rice field occasionally since his early childhood. The most likely causal agent of his complaint is? A Entamoeba Histolytica B Fasciolopsisbuski C Schistosoma haematobium D Schistosoma japonicum E Schistosoma mansoni A9-year-old girl sustains a small 0.5 cm long laceration to her right index finger while cutting a cucumber with a knife. Which of the following substances, on contact with the injured vascular basement membrane, activates both the coagulation sequence and the kinin system as an initial response to this injury? A Thromboxane Histamine B Hageman factor С E Platelet activating factor D Plasmin A 50-year-old man is having fever of 101 oF and generalized body aches with cough and loss of taste as well. He had no breathing problem and his oxygen saturation is also within normal range. What will be the most desirable management in this case? He should be hospitalized Should be put on oxygen at home D Tested for COVID-19, if Use of oral antibiotics and no I F positive and with no need of isolation complication he should be isolated at home with symptomatic treatment Bacillus anthracis is a principal pathogen of a disease known as "anthrax" which primarily infects animals like goats and cattle and is transmitted to humans through ingestion or inhalation of spores. What are the two important virulence factors of this organism? Capsule & Exotoxins Exotoxins & Enterotoxins Capsule & Enterotoxins B Endotoxins & Capsule E Endotoxin & Exotoxin A culture isolate from a patient with subacute endocarditis is reported to be gram-positive and possess a complex carbohydrate cell wall. What is the most likely taxonomic group of the causal agent? B Parasite A Fungus C Prion D Prokaryote Virus E A man with a throat infection was treated with Clindamycin. After receiving 7 days of treatment of the antibiotic he developed severe diarrhea. What could be the most probable cause? B Clostridium Tetani Clos<mark>tridium difficile</mark> Disturbance in normal flora overgrowth overgrowth D Multiple bacterial overgrowth E Staphylococcus aureus to overgrowth. An obese diabetic woman presents with a complaint of red and painful skin in her abdominal skin folds. Examination reveals a creamy white material in the skin folds. Microscopic examination of the exudate reveals oval budding structures mixed with more budding elongated forms. The most likely causal agent is C Epidermophyton Aspergillus fumigatus B Candida albicans

Microsporumcanis Sporothrixschenckii A 43-year-old woman has had a chronic cough with fever and weight loss for the past one month. A chest radiograph reveals multiple nodules from 1 to 4 cm in size, some of which demonstrate cavitation in the upper lobes. A sputum sample reveals the presence of acid fast bacilli. Which of the following cells is the most important in the development of her lung lesions? A Fibroblasts B Mast cells C Macrophages D Neutrophils Platelets E For many of the antigenic changes seen in Neisseria gonorrhoeae and Borrelia recurrentis, the cause of relapsing fever was not transposons. What could be the cause for these antigenic changes? A Phages В Plasmids Programmed C rearrangements D Transduction E Transformation Your patient is a 25-year-old man with a urethral discharge. Gram stain of the pus reveals many neutrophils but no bacteria. Which of the following organisms is the most likely cause? Candida Albican Clostridium perfringens Chlamydia trachomatis В D Haemophilus ducreyi E Treponema pallidum A young man detected positive for HIV by ELISA was sent to a specialist for confirmation of the disease and treatment. The specialist advised PCR for confirmation. What does PCR detect? PCR detects antibodies in В PCR determines body PCR amplifies tiny quantities of the HIV DNA the specimen immunity against AIDS present, than detect it. D PCR measure antibodies E PCR directly measure against the HIV DNA present antigens of the HIV present. A 19-year-old man incurs a stab wound to the chest. The wound is treated in the emergency room. Two months later there is a firm, 3 x 2 cm nodular mass with intact overlying epithelium in the region of the wound. On examination, the scaris firm, but not tender, with no erythema. This mass is excised and microscopically shows fibroblasts with abundant collagen. Which of the following mechanisms has most likely produced this series of events? Development of a В Foreign body response from С Keloid formation fibrosarcoma suturing Staphylococcal wound Poor wound healing from D diabetes mellitus infection

 \odot 'Seeing the patient with 'Setting up the interview' and 'Setting up the interview Empathy' and 'Strategy' 'Strategy and summary' and 'Suspending medical jargon' D 'Sitting the patient down' 'Sitting the patient down' and 'Suspending medical jargon' and 'strategy and summary' 91 A 40-year-old woman presented with diplopia and other signs of cranial nerve weakness. History reveals she grows her own vegetables and likes to preserve them in jars that she prepares at home. She is fond of her preserved string beans, which is what she ate uncooked in a salad for dinner last night. Which one of the following is the most likely cause of this clinical picture? A Bacillus anthracis Clos<mark>tridium botulin</mark>um Clostridium perfringens B L C D Clostridium tetani Listeria monocytogenes E 92 A 40 years old man, generally fit and healthy underwent a right inguinal hernia repair. The surgery was clean and uneventful. What is the expected rate of infection of the surgical wounds? 0% 5-6% Α В 1-2% D >10% >15% A young man presented in hospital with chronic ill health. Doctors suspected AIDS. The presumptive diagnosis of HIV infection is often made by the detection of antibodies in the patient's serum to the protein of HIV using 93 the enzyme-linked immunosorbent assay (ELISA) test. The protein is A gp122 В gp162 gp42 D p24 E p30 A man in late thirties presented to the Dermatology OPD of a tertiary care hospital with complaint of crusted ulcers on 94 his hands and forehead since 3 months. After laboratory confirmation he was diagnosed with Cutaneous Leishmaniasis. Which of the following statements about Cutaneous Leishmaniasis is the most appropriate? Α Biologically transmitted Mechanically transmitted Transmitted by direct B C vector borne disease vector borne disease Contact D Transmitted by in direct Vehicle borne infectious contact disease 95 A case of suicidal poisoning was brought to the emergency department of a tertiary care hospital. The on duty doctor decided to do Gastric Lavage. In which of the following poisoning Gastric Lavage is indicated? A Carbolic Acid В Convulsant Poisoning D Oxalic Acid E Sulphuric Acid 96 A mother takes her 6 year old son to her general practitioner (GP) extremely anxious because the child has that morning stabbed himself with a needle he found in a park frequently used by drug users. Apart from a minor scratch to the right hand the child is otherwise well and has no past medical history of note. What will be the most appropriate action for the GP at this consultation? CD 4 count will be effected First test to be performed is Perform complete blood B initially western blot test count and ESR D Reassure the mother and E Test the child for Hepatitis C, suggest an accelerated HIV. Hepatitis B surface course of Hepatitis B antigen vaccine 97 A 44 year old man was found dead at his residence with two gunshot wounds on his chest. Which inquest system will be used to investigate this case? A Coroner's Inquest Magistrate's Inquest Police Inquest D Procurator Fiscal 98 A boy has been referred to the department for age determination. After dental examination, it was found that his 2nd permanent molar has erupted. What is the probable age? A 6 years 8 years 10 years С D 12 years 14 years E

 \odot < Antacids Penicillin & NSAIDs Pharngectomy Reassurance Tonsillectomy 117 A young doctor conducted an autopsy a year ago. The honorable court summoned him for evidence recording. Which of the following in court proceedings is called as double edged sword? Arguments by the counsel Cross examination Police investigation В of the deceased D Re-examination Statement of medicolegal officer 118 While teaching the topic of PUO, a physician explained the most common causes of this condition to year 3 MBBS students. Which of the following conditions is considered to be the most common cause of PUO in a developing country (once called a third world country)? Brucellosis Herpes simplex Virus C Malaria infection D Syphilis E Tuberculosis 119 A 20 year-old female came to the OPD with the complaints of redness in the right eye, grittiness and watery discharge On examination Regurgitation test was negative, cornea clear, conjunctival redness observed only in the temporal side. Which of the following treatments will be more appropriate in this patient? A Antiviral drugs В Broad spectrum antibiotics С Oral antibiotics D Strong steroid only pical artificial tears along roid 120 An adult patient presents with complaints of nasal obstruction and headache for the last 1 year. On examination the nasal mucosa is congested with thick mucopurulent discharges in both the nasal cavities and post nasal dripping. Nasal septum is deviated and both the turbinates are enlarged. Patient has history of nasal trauma. What's the most probable diagnosis? Allergic Rhinitis Chronic Rhinosinusitis Fungal Rhinosinusitis В С D Nasal Polyposis E Vasomotor Rhinitis A cancer patient with chemotherapy has to have her intravenous port revised after it becomes blocked and the catheter is found to contain bacterial contaminants. Which of the following is most likely to be a factor in this pathogenesis? A Biofilm production Ergosterol containing Peptidoglycan laver membrane D Possession of IgA protease E Possession of Pilli Resistance to antibiotics in bacteria especially in animals is mainly due to the injudicious use of antibiotics. This is mainly due to genetic information transfer between viable bacteria. The genetic transfer between viable bacteria occurs by A Conjugation в Cell fusion Recombination Transduction D Transformation E An adult female patient was admitted in the CCU (Coronary Care Unit) with CCF (Congestive Cardiac Failure). The Doctor-on-duty while intending to give her a loading dose of Digoxin, wrote in the chart-order "Digitalize rapidly". Which of the following pharmacokinetic parameters of Digoxin most probably led the Doctor to go for rapid digitalization (by giving loading dose of Digoxin)? Plasma Half-life Protective index Plasma Clearance В Therapeutic index Е Therapeutic window A pharmacologist was performing experiments on large number of guinea pigs in his laboratory using drug X. His experiments had multiple goals but he was principally interested in finding the dose of drug X causing specific toxic effect in relation to its effective dose. Which of the following parameters might describe the best his major focus of interest? Median Effective dose Protective index B Me Therapeutic index E Therapeutic window

Plasma half-life Steady-state concentration D Volume of distribution Therapeutic index E A Physician, while prescribing long-term Chloroquine for a 60-years old patient suffering from Rheumatoid arthritis, advised him to have regular eye check-ups every 03 months. Which of the following factors on the part of the patient or the drug might have made the Physician worry about the patient's vision? Selective distribution of Α Old age of the patient Chloroquine to some specific tissues erent tissues to some indi Very large Volume of distribution of Chloroquine (13000 Liters) E Very long plasma half-life of Chloroquine (214 hours) D A female patient age 50 years was admitted to the Nephrology unit of a tertiary care hospital with chronic renal failure. She was on multiple dugs. The Professor incharge of the unit was worried about the plasma protein binding of these drugs. He discussed the case during the morning round with the TMOs (Trainee Medical Officers). Which of the following statements regarding plasma protein binding of drugs is NOT correct?
 Acidic drugs are attached loosely to the plasma
 B
 Drugs circulate partly free in the plasma and partly bound
 C
 Hypoalbuminaemia that occurs in chronic renal disease may
 А albumin to the plasma proteins adversely affect the plasma protein binding of drugs D n every mole cule of plasma L C On every molecule of plasma albumin, there are only two sites for the attachment of acidic drugs albumin, there are many site hment of basic
