ELECTRICAL ENGINEERING DEPARTMENT

LAB NO # 1

INTRODUCTION TO MATRIX , PROGRAMMING IN MATLAB

MATRIX IN MATLAB

DEFINING MATRIX:

```
>> A=[1 2 3 4]
```

```
A =
```

```
1 2 3 4 %Define me a matrix A
```

For going to the second row we will always use semicolon.

```
>> A=[1 2 3 4;5 6 7 8]
```

```
A =
```

```
1 2 3 4  
5 6 7 8
```

If we want to excess the number 5 then we write:

```
>> A(2,1)
```

```
ans =
```

```
5
```

ACCESSING ELEMENTS IN MATRIX

If we want to access the number 8 then

```
>> A(2,4)
```

```
ans =
```

```
8
```

SIZE COMMAND

Size command is used for find row and column size.eg.

```
>> size(A)
```

```
ans =
```

```
2 4
```

ROW AND COLUMN VECTORS

```
>> ROWMATRIX=[1 2 3]
```

```
ROWMATRIX =
```

```
1 2 3
```

```
>> columnmatrix=[1;2;3]
```

```
columnmatrix =
```

```
1
```

```
2
```

```
3
```

COLON OPERATION

```
>> %t=intial valve:step size:final valve
```

```
>> t=1:2:9
```

```
t =
```

```
1 3 5 7 9
```

```
>> t=1:2:10
```

```
t =
```

```
1 3 5 7 9
```

```
>> t=1:10
```

```
t =
```

```
1 2 3 4 5 6 7 8 9 10
```

```
>> t=9:-2:1
```

```
t =
```

```
9 7 5 3 1
```

```
>> t=4:2:1
```

```
t =
```

```
1×0 empty double row vector
```

BUILT-IN MATRIXES

1. ZEROS MATRIX:

```
>> zeros(3)
```

```
ans =
```

```
0 0 0
```

```
0 0 0
```

```
0 0 0
```

```
>> zeros(2,3)
```

```
ans =
```

```
0 0 0
```

```
0 0 0
```

2. ONES MATRIX:

```
>> ones(3)
```

```
ans =
```

```
1 1 1
1 1 1
1 1 1
```

```
>> ones(2,3)
```

```
ans =
```

```
1 1 1
1 1 1
```

3. EYE MATRIX

Eye matrix is a identity matrix.

```
>> eye(3)
```

```
ans =
```

```
1 0 0
0 1 0
0 0 1
```

```
>> eye(2,3)
```

```
ans =
```

```
1 0 0
0 1 0
```

END KEYWORD:

Its helpful when we don't know what the last index is.

```
>> x=1:10
```

```
x =
```

```
1 2 3 4 5 6 7 8 9 10
```

```
>> x(3:end)
```

```
ans =
```

```
3 4 5 6 7 8 9 10
```

```
>> x(3:2:end)
```

```
ans =
```

```
3 5 7 9
```

```
>> b=[1 2 3;4 5 6];
```

```
>> b(end,:)
```

```
ans =
```

```
4 5 6
```

```
>> b(end,1:2)
```

```
ans =
```

```
4 5
```

```
>> b(end-1,:)
```

```
ans =
```

```
1 2 3
```

```
>> b(end,end)
```

```
ans =
```

```
6
```

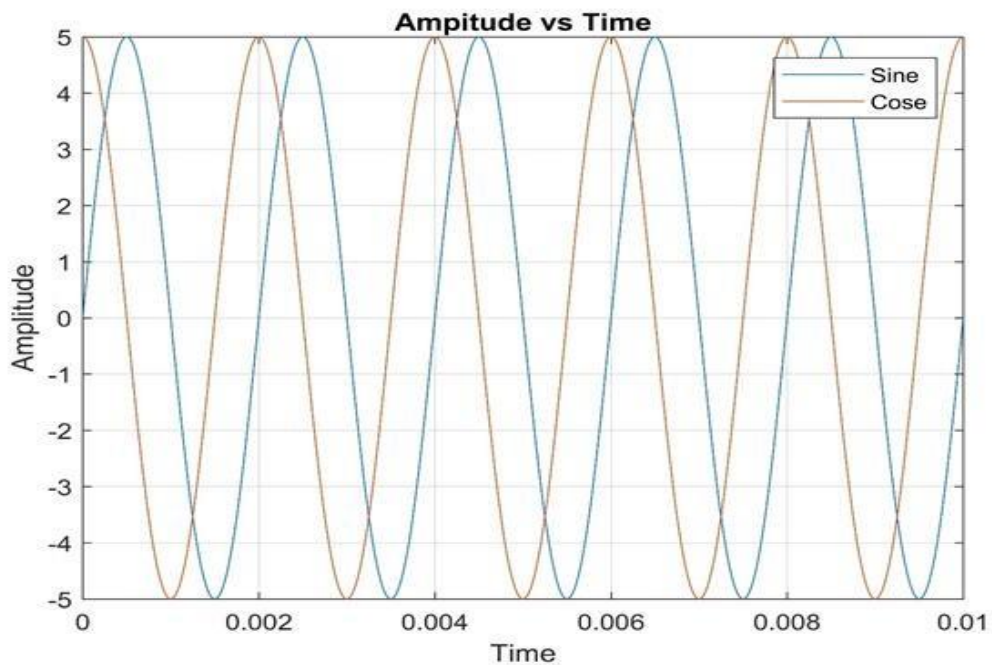

LAB NO # 2

TO PLOT A CONTINUOUS TIME SINOCIDAL SIGNAL IN MATLAB

PROGRAM

- ❖ F=500;
- ❖ T=1/F;
- ❖ A=5;
- ❖ t=0:T/100:5*T;
- ❖ x=A*sin(2*pi*f*t);
- ❖ plot(t,x);
- ❖ hold on
- ❖ y=A*cos(2*pi*f*t);
- ❖ plot(t,y);
- ❖ xlabel('time');
- ❖ ylabel('amplitude');
- ❖ title('amplitde vs time');
- ❖ legend('sine','cose');
- ❖ grid on

GRAPH:

HOME TASK

$\sin(2*t)$ & $\sin(3*t)$ for $t=[-5:0.01:5]$

- ❖ $t=[-5:0.01:5];$
- ❖ $x=\sin(2*t);$
- ❖ $y=\sin(3*t);$
- ❖ $\text{plot}(t,x,t,y);$
- ❖ $\text{xlabel}('time');$
- ❖ $\text{ylabel}('amplitude');$
- ❖ $\text{title}('home\ work');$
- ❖ $\text{legend}('sine2t\ curve\ \&\ sine3t\ curve');$

These graphs have difference in frequency.

- $\sin 2t$ has low frequency and high wavelength as compared to $\sin 3t$ which has high frequency and low wavelength in comparison.

TO STUDY AND PLOT TIME TRANSFORMATION OF SIGNAL IN

MATLAB

TIME TRANSFORMATION:-

- Time Shift
- Time Scaling
- Time Reversal

1. TIME SHIFT:

a) DISCRETE TIME SHIFT:

PROGRAM:

```
❖ t=[1 2 3 4 5 6 7];
❖ x=[0 1 2 3 2 1 0];
❖ subplot(1,3,1)
❖ stem(t,x) %plotting the original signal
❖ xlabel('time')
❖ ylabel('amplitude')
❖ grid on
❖ a=t+3; % delay the signal
❖ subplot(1,3,2)
❖ stem(a,x) %plotting delay signal
❖ xlabel('time')
❖ ylabel('amplitude')
❖ grid on
❖ b=t-3; % advance the signal
❖ subplot(1,3,3)
❖ stem(b,x) %plotting advanced signal
❖ xlabel('time')
❖ ylabel('amplitude')
❖ grid on
```

RESULT:

b). CONTINUOUS TIME SHIFT:

PROGRAM:

- ❖ `t=0:0.01:3*pi;`
- ❖ `y=sin(t);%original signal`
- ❖ `subplot(3,1,1)`
- ❖ `plot(t,y)`
- ❖ `title('original signal')`
- ❖ `y1=sin(t+1) %advanced signal`
- ❖ `subplot(3,1,2)`
- ❖ `plot(t,y1)`
- ❖ `title('advanced signal')`
- ❖ `y2=sin(t-1)%delayed signal`
- ❖ `subplot(3,1,3)`
- ❖ `plot(t,y2)`
- ❖ `title('delayed signal')`

RESULT:

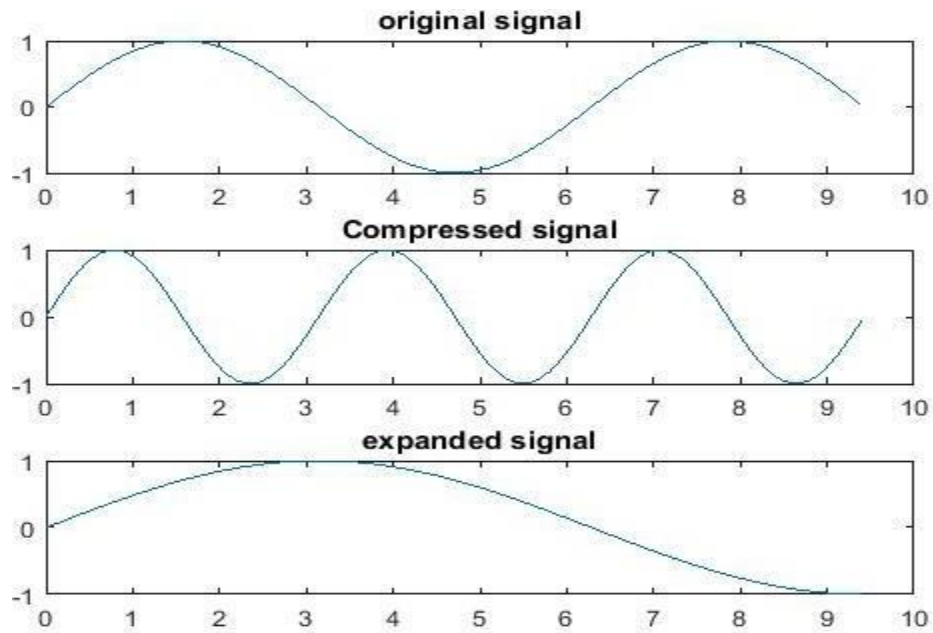

2. TIME SCALING:

PROGRAM:

- ❖ `t=0:0.1:3*pi;`
- ❖ `X=sin(t)`
- ❖ `subplot(3,1,1)`
- ❖ `plot(t,X)`
- ❖ `title('original signal')`
- ❖ `Y=sin(2*t) %compressed signal`

LAB # 11

INTRODUCTION TO SIMULINK

SIMULINK:

MATLAB and simulink are two very different pieces of software with radically different approaches to modeling of signals and systems. MATLAB is an imperative programming language, whereas simulink is a block diagram language. Simulink is used for a variety of purposes, but mainly for the simulation of real time systems. The function of simulink is very similar to that of electronic work bench or circuit designer.

USING SIMULINK:

To create a simulation in simulink, a new file is created first. In this file, objects from the simulink library browser are inserted. If we are not sure in which tool box the object would lie, we can use the search command.

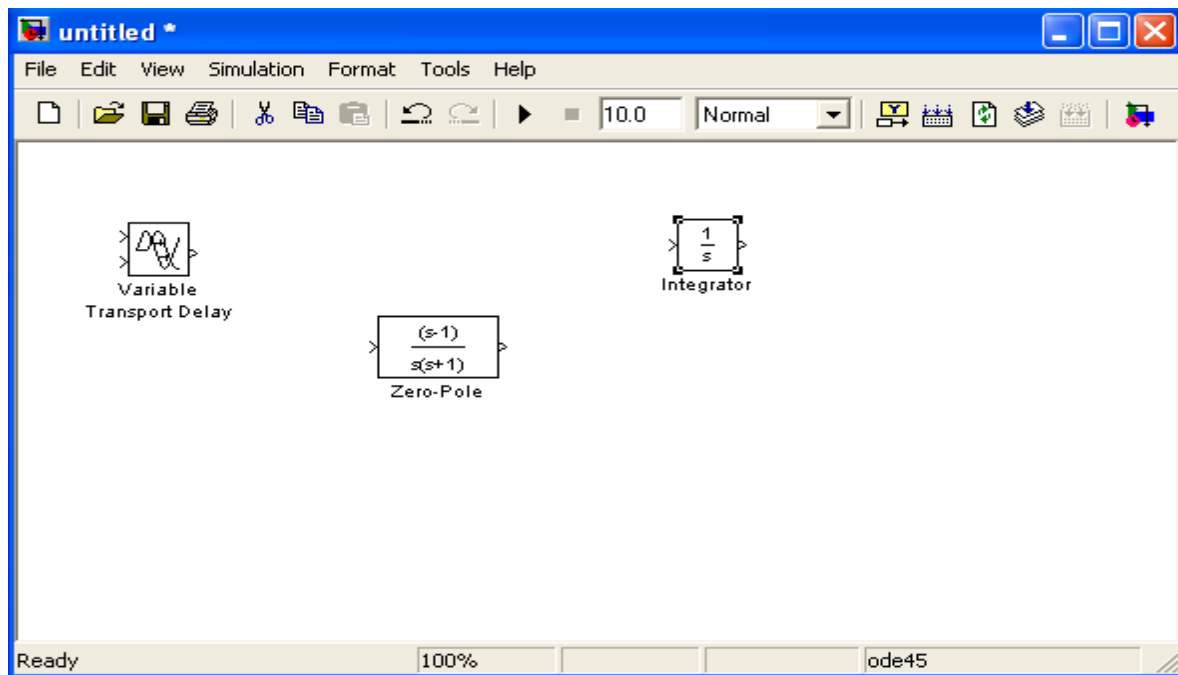

Figure 2: Simulation files in Simulink

FIND SIMPLE MODEL IN SIMULINK

INTRODUCTION TO GUI

PROGRAM OUT:

```
function varargout = lab14(varargin)
% LAB14 MATLAB code for lab14.fig
%   LAB14, by itself, creates a new LAB14 or raises the existing
%   singleton*.
%
%   H = LAB14 returns the handle to a new LAB14 or the handle to
%   the existing singleton*.
%
%   LAB14('CALLBACK',hObject,eventData,handles,...) calls the local
```

```
% function named CALLBACK in LAB14.M with the given input arguments.
%
% LAB14('Property','Value',...) creates a new LAB14 or raises the
% existing singleton*. Starting from the left, property value pairs are
% applied to the GUI before lab14_OpeningFcn gets called. An
% unrecognized property name or invalid value makes property application
% stop. All inputs are passed to lab14_OpeningFcn via varargin.
%
% *See GUI Options on GUIDE's Tools menu. Choose "GUI allows only one
% instance to run (singleton)".
%
% See also: GUIDE, GUIDATA, GUIHANDLES
```

```
% Edit the above text to modify the response to help lab14
```

```
% Last Modified by GUIDE v2.5 02-Sep-2020 13:21:34
```

```

RESULT:

❖ 3*4

=12

LAB # 15

USING FVTOOL TO DETERMINE

- ❖ Magnitude response
- ❖ Phase response
- ❖ Poles-zero plot
- ❖ Impulse response
- ❖ Step response

PROGRAM:

- ❖ num=[2.2403 2.4908 2.2403];
- ❖ den=[1 0.4 0.7];
- ❖ fvtool(num,den)

RESULT

A) MAGNITUDE RESONSE:

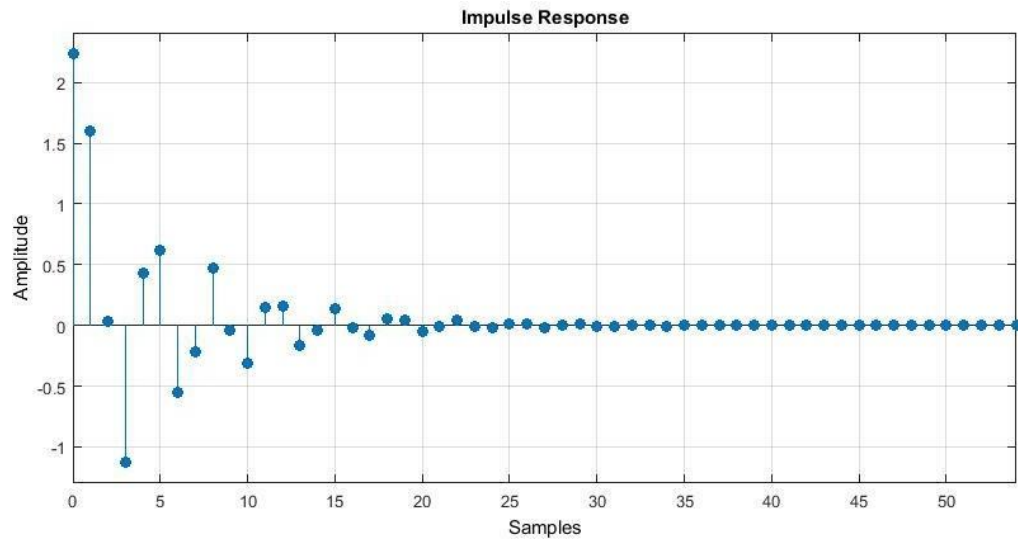

B) PHASE RESPONSE:

C) POLES-ZERO PLOT:

D) IMPULSE RESPONSE:

E) STEP RESPONSE:
