

POSTERIOR UVEITIS

#1 RETINITIS

SUN working group classification of uveitis and the primary site of inflammation

Type	Primary site of inflammation	Includes
Anterior uveitis	Anterior chamber	Iritis, iridocyclitis, anterior cyclitis
Intermediate uveitis	Vitreous	Pars planitis, posterior cyclitis, hyalitis
Posterior uveitis	Retina/choroid	Focal, multifocal, diffuse choroiditis, chorioretinitis, retinochoroiditis, retinitis, neuroretinitis
Panuveitis	Anterior chamber, vitreous and retina or choroid	

RETINITIS

(inflammation of retina)

CHOROIDITIS

(inflammation of choroid)

VASCULITIS

(inflammation of the vessels)

NEURORETINITIS

(inflammation of disc and
retina)

RETINITIS

(inflammation of retina)

CHOROIDITIS

(inflammation of choroid)

- RETINO-CHOROIDITIS
- CHORIO-RETINITIS

VASCULITIS

(inflammation of the vessels)

NEURORETINITIS

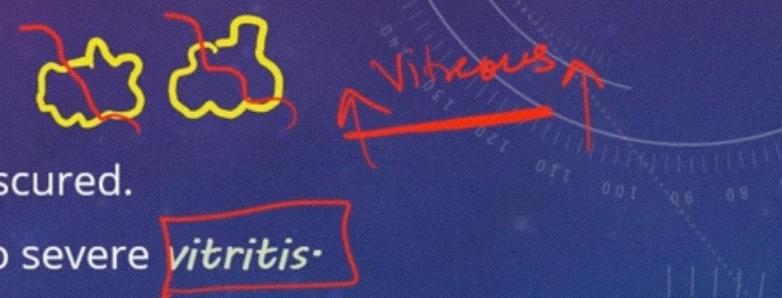

(inflammation of disc and
retina)

HOW DO RETINITIS LESION LOOK ?

✓ FULL-THICKNESS OR INNER RETINAL INVOLVEMENT

- *BRIGHT YELLOW FLUFFY* lesions with indistinct borders.
- *Retinal vasculature* passing through these lesions appears obscured.
- At times, Mimic cotton-wool spots and may produce moderate to severe **vitritis**.

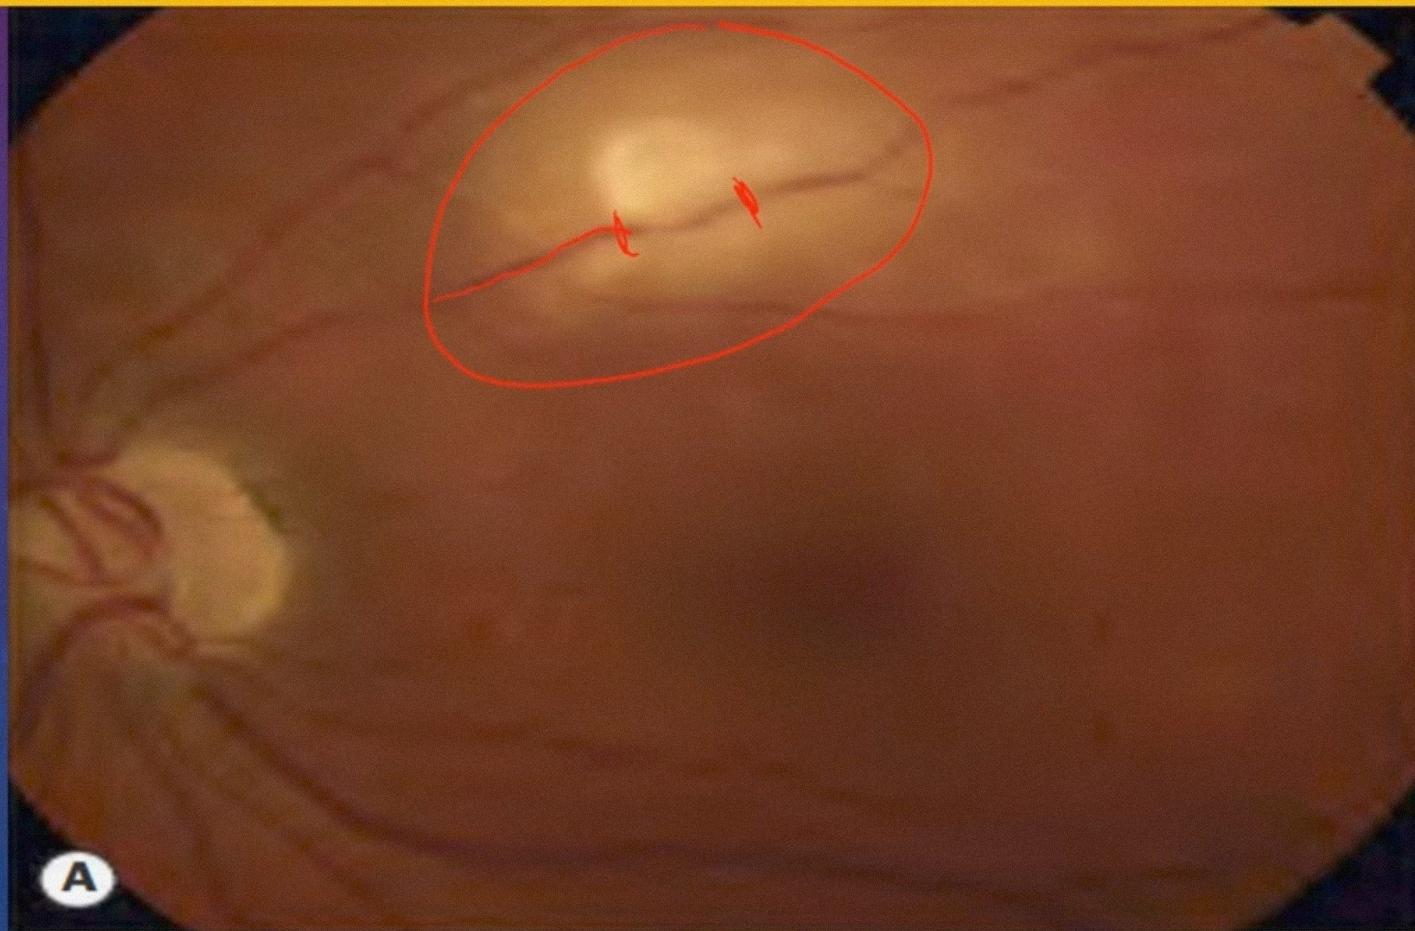

OUTER RETINAL INFLAMMATORY LESIONS appear

- dull orange or yellow with indistinct borders,
- *Vasculature* may remain clear over the lesions
- vitritis could be mild-moderate.

RETINITIS

- FOCAL (SOLITARY)
- MULTIFOCAL
- GEOGRAPHIC OR DIFFUSE

POSTERIOR UVEITIS WITH RETINITIS

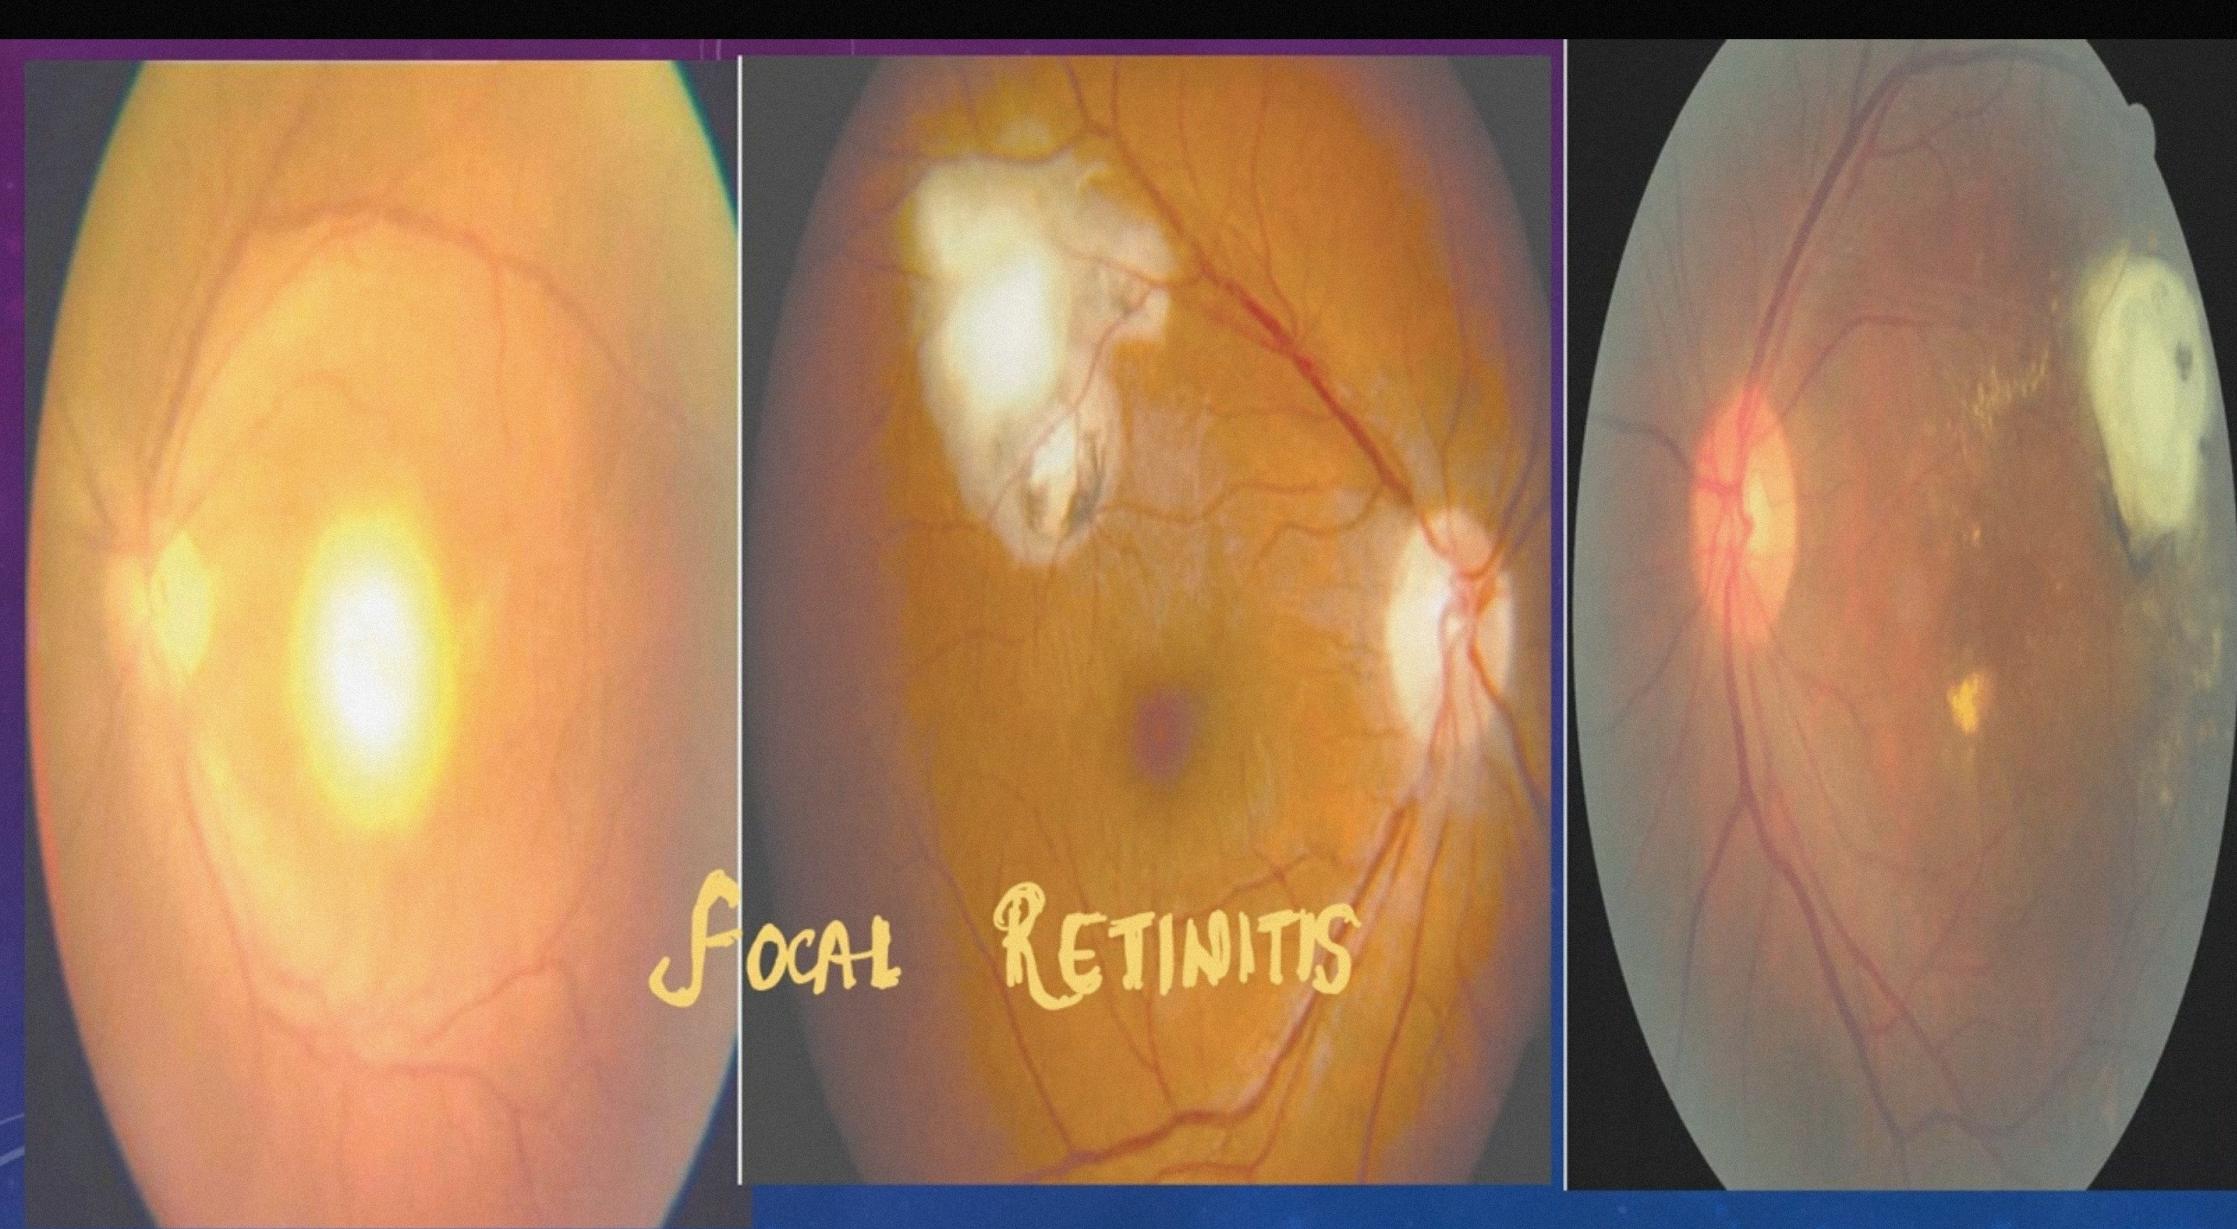

FOCAL RETINITIS

- TOXOPLASMOSIS
- TOXOCARA
- CYSTICERCOSIS
- ONCHOCERCERIASIS
- MASQUERADE SYNDROME

MULTIFOCAL RETINITIS

- SYPHILIS
- HSV
- VZV
- CMV
- DUSN
- CANDIDA
- SARCOID
- MASQUERADE SYNDROME

Typhoid , rickettsia, chikungunya, dengue, West Nile virus,
and Zika virus

CHOROIDITIS

HOW DOES CHOROIDAL INFLAMMATION LOOK LIKE ?

- *Dull yellowish orange-colored*, deeply situated lesions with indistinct borders
- sometimes with elevated appearance .
- *Retinal vessels* will appear clear, passing over the lesion in contrast to retinitis where the vessels passing through the lesions are obscured.
- *Vitritis* in choroiditis is relatively less pronounced.
