# WHAT IS LITERATURE REVIEW ???

- 
- A **literature review** is both a summary and explanation of the complete and current state of knowledge, on a limited topic as found in academic books and journal articles.

**What is Medical literature???**

## Medical literature

- **Published**

22 000 biomedical journals

≈ 5 000 journals indexed in Medline

17 000 biomedical books annually

- **Gray literature**

Conference proceedings

Reports

Theses

Unpublished studies

# Why to do a literature review?

**What's the purpose??**

- 
- **To see** what has and has not been investigated.
  - **To identify** data sources that other researchers have used.
  - **To learn** how others have defined and measured key concepts.
  - **To develop** alternative research projects.
  - **To contribute** to the field by moving research forward.
  - **To provide** evidence that may be used to support your own findings.

- 
- To understand your topic in the context of what is already known.

**□ WHERE DO YOU FIND LITERATURE ?**

# Sources of Literature

## Primary

- Reports
- Theses
- E-mail, Memos, minutes
- Conference proceedings
- Company reports
- Unpublished manuscript sources
- Some government publications such as white paper etc.

## Secondary

- Books
- Journals
- Newspapers
- Some government Publications

## Tertiary

- Indexes
- Abstracts
- Catalogues
- Encyclopedia
- Dictionaries
- Bibliographies
- Citation Indexes

**(Original) Research Article**  
e.g. empirical study

**Review Article**  
e.g. literature review, systematic review

**Theoretical Article**

BIG range

# SEARCH ENGINES AND DATA BASES

NLM, the World's  
Largest Medical  
Library produces  
MEDLINE

# MEDLINE

MEDLINE is a  
bibliographic  
database with over  
24 million citations

These vendors *lease*  
MEDLINE from NLM so it  
can be searched through  
their own interfaces

**Free!**

PubMED (**Public  
MEDLINE**) is NLM's  
search engine interface  
for MEDLINE

**Narrative Reviews**

**Descriptive Reviews**

**Scoping Reviews**

**Critical Reviews**

**Typology  
of  
Reviews**

**Meta-Analyses**

**Systematic Reviews**

**Theoretical Reviews**

**Umbrella Reviews**

# Narrative Review

- It summarizes information from multiple sources
- Provides overview of a particular topic
- They can help to identify gaps in the literature
- Provide context for new research
- Offer insight into the current state of knowledge on a topic.
- However, as it rely on author's interpretation of the literature ,they can be subject to bias. May not be rigorous or reproducible
- E.G "The effects of mindfulness meditation on reducing anxiety"

# Descriptive or Mapping reviews

- It aims to provide an overview of the literature on particular topic.
- It is more systematic in approach.
- Systematic search of relevant databases.
- Literature is organized and summarize e.g creating tables ,diagrams .
- Goal is to provide comprehensive overview on a specific topic .research methods and study designs .
- E.g “ The effectiveness of different intervention for managing chronic pain in older adults”

# Scoping Review

- The goal is to identify the depth of literature on a topic .
- Useful in identifying research gaps and area for future research.
- It provides an overview of existing literature on a topic when is new or complex.
- E.g “ use of telemedicine for managing chronic conditions in rural population”

# Systematic Review

- It uses rigorous and structured approach to identify all relevant literature on a research topic .
- It provides comprehensive and unbiased summary of the current evidence on a topic.
- It includes ,inclusion and exclusion criteria for selecting studies
- Use standardized tool to extract data from each article.
- It informs clinical practice ,policy decisions or future research directions.
- E.g “ effectiveness of CBT for depression in children :a

# Meta-analyses

- When a statistical technique is used to combine the results of multiple studies that has investigated the same research topic/question .
- It provides unbiased summary of the evidence on a particular topic .
- E.g “ effectiveness of vitamin c supplements on cold”

# Conclusion

- Critical analysis  **Narrative review**
- Synthesis of the findings  **descriptive/mapping review**
- Depth of literature  **scoping review**
- Use specific methods to analyze studies  **systematic review**
- Use statistical technique to draw conclusion  **meta-**

- 
- 1. A Literature review that uses a specific methods to search , select and analyze relevant studies is known as:
    - A. narrative review
    - B. scoping review
    - C. descriptive review
    - D. systematic review

- 
- 1. A Literature review that combines statistical results from multiple studies to draw conclusions is known as :
    - A. narrative review
    - B. scoping review
    - C. descriptive review
    - D. systematic review
    - E. meta-analysis

A white, cloud-shaped sticker with a small tail at the bottom, placed on a brown corkboard. The sticker has the words "Thank you!!" written in a black, casual, handwritten-style font. The text is arranged with "Thank" on the top line and "you!!" on the bottom line, slightly indented to the right. The background is a textured, brown corkboard. There are decorative horizontal bars at the top: a yellow one on the left and a teal one on the right.

Thank  
you!!
