

2. 3 yrs old boy is brought to OPD with complain of difficulty in climbing stairs, on examination has lordosis & calve hypertrophy - what is pattern of inheritance

- A. AD
- B. AR
- C. Idiopathic
- D. X linked dominant
- E. X linked recessive

9. 3 yrs old woth 2 days history of vomiting,fever watery diarrhea.On examination is alert,drt mucous membrane,capillary refill 3 seconds.Labs are normal.Stool examination reveals rotavirus.Classify dehydration avorsing to IMNCI?

- A.gastroenteritis with no dehydration
- B.gastroenteritis with mild dehydration
- C.gastroenteritis with moderate dehydration
- D.gastroenteritis with severe dehdration
- E.gastroenteritis with severe dehydration and shock

27. A 3 years old child from KP presented with severe wasting, bipedal edema, and distended abdomen. According to the mother the child takes bread and tea. What type of malnutrition is present in the child?

- A. Kwashiorkor
- B. Marasmus
- C. Mixed malnutrition
- D. Iron deficiency
- E. Vitamin A deficiency

34. 50 year old male present with hematemesis. Endoscopy shows ulcer. What is the most common cause of upper GI bleed?

- A. Mallory Weis tear
- B varices
- C. Gastric ulcer
- D. Dudenal ulcer.

35. man with sudden epigastric pain

Air under diaphragm

perforation site

Lesser curvature

Antrum

1 part of duodenum

2 bd part of duodenum

Esophagus

37. 65 yr old with with palpable nontender gallbladder and jaundice

Pancreatitis

Carcinoma head pancreas
Cbd stricture
Cholecystitis

50. A patient with esophageal varices stabilized in ER. What is next first line management

- A band ligation
- B TIPS
- C octreotide
- D sengstaken tube
- E beta blockers

51. Which is true about diverticular disease of the colon?

- 1. Rectum is the most common site
- 2. In sigmoid resection bowel preparation is done by giving perioperative oral and iv antibiotics
- 3. Associated with long and redundant colon
- 4. Incidentally found cecal diverticulum during surgery is excised at the same time
- 5. Yaad nahi

56. Which of the following drug for OCD has maximum anticholinergic effect?

- A) Fluvoxamine
- B) Sertraline
- C) Fluoxetine
- D) Clomipramine
- E) Buspiron

59. 25yrs old male reports spending several hrs each day checking and re checking whether doors are locked or not. Despite knowing these behaviours are irrational, he feels compelled to perform them,. Dx? a: ocd (answer)

- b: panic disorder
- c: post traumatic disorder.

82. A 65-year-old patient has dizziness, nausea, and inability to walk due to imbalance. There is no hearing loss. Symptoms have been present for many years. What is the most likely diagnosis?

- A. BPPV (Benign Paroxysmal Positional Vertigo)
- B. Benign paroxysmal prosthesomal vertigo (not a real condition)
- C. Vestibular neuritis
- D. Acoustic neuroma
- E. Stroke

83. A 40-year-old woman experiences sharp unilateral stabbing pain at the back of her throat triggered by swallowing. What is the diagnosis?

- A. Trigeminal neuralgia

- B. Glossopharyngeal neuralgia
- C. Cluster headache
- D. Migraine
- E. TMJ disorders

93. A 22 years old lady presented with 3 days' history of high grade fever with chills and vomiting.

Clinical

examination shows pale mildly icteric and pyrexia lady with palpable spleen.

Her temperature is 105 Degree F. The most likely diagnosis in this patient is:

- a. Enteric fever
- b. Malaria
- c. Brucellosis
- d. Acute hepatitis
- e. Acute hemolytic anemia

107. A 35 year-old patient with history of SLE is presented with facial swelling, hematuria, proteinuria. Lab shows elevated anti double strand DNA antibodies and decreased compliment levels. Diagnosis:

- A. Lupus nephritis
- B. IGA nephropathy.
- C. Alport syndrome
- D. Good pasture syndrome
- E. Membranous nephrology

110. A 60 yr old female presented with hemoptysis and hematuria for 1 week. She is unwell for 1.5 months. There is nasal crusting on examination. What is the specific serological test done?

- a) anti GBM antibodies
- b) P anca
- c) C anca
- d) ANA
- e) anti ds DNA antibodies

76) 25 male presented with ascending weakness and areflexia after respiratory infection. Dx

MS

GBS

Spinal cord injury

mcq 18

diet of a celiac disease patient

mcq 19

acute intermittent porphyria

96) A 22 year old male had pruritus, excoriation, and burrows..

What is the treatment?

Block Q

Mcq 74

€55 female with a history of breast cancer lower back pain, and weakness and legs and urinary incontinence. MRI show spinal cord compression. What will be the next step of management?

1. NSAIDS
2. Radiation therapy chemotherapy
3. Oral steroids
4. Surgical decompression

(Ans: oral steroids)

114.

A 17 year old boy present with 6 year history of epigastric pain and gastrointestinal discomfort. He is emaciated with delayed puberty and the rest of examination is normal. Which of the following is most likely diagnosis?

- A.Celiac disease
- B.IBD
- C.lactose intolerance
- D.diabetes mellitus
- E.irritable bowel syndrome

100)A 56-years-old farmer male was admitted with a 03 weeks history of malaise, headache, pain in his arms, legs and lower back and night sweats.

His appetite was poor and has lost 03 kg of weight. On examination he was unwell. He had generalized

lymphadenopathy and febrile. He also had a palpable spleen of 04cm below left costal margin. Investigation shows Hb 11.8g/dl, WCC 2x106/L, platelets 440x108/L, ESR 66mm/h, CRP 210 ng/L and CXR shows calcified Para-tracheal lymph nodes. What is the most likely diagnosis?

- a. Sarcoidosis
- b. Tuberculosis
- c.Brucellosis
- d. Aspergillosis
- e. Acquired immune deficiency syndrome

Block Q

107. A 35 year-old patient with history of SLE is presented with facial swelling,hematuria, proteinuria. Lab shows elevated anti double strand DNA antibodies and decreased compliment levels. Diagnosis:

- A. Lupus nephritis
- B. IGA nephropathy.
- C. Alport syndrome
- D. Good pasture syndrome
- E. Membranous nephrology

83. A 40-year-old woman experiences sharp unilateral stabbing pain at the back of her throat triggered by swallowing. What is the diagnosis?

- A. Trigeminal neuralgia
- B. Glossopharyngeal neuralgia
- C. Cluster headache
- D. Migraine
- E. TMJ disorders

82. A 65-year-old patient has dizziness, nausea, and inability to walk due to imbalance. There is no hearing loss. Symptoms have been present for many years. What is the most likely diagnosis?

- A. BPPV (Benign Paroxysmal Positional Vertigo)
- B. Benign paroxysmal prothesomal vertigo (not a real condition)
- C. Vestibular neuritis
- D. Acoustic neuroma
- E. Stroke

16. A neonate presented with severe jaundice 48hrs after birth and high unconjugated bilirubin. What is likely?

- A. Crigler Najjar 1
- B. Crigler Najjar 2
- C. Gilbert syndrome
- D. Rotor syndrome
- E. Dubin Johnson syndrome
