

NEONATAL HISTORY

1. Antenatal History

Maternal age, parity, and obstetric history

Antenatal visits and any complications

Maternal infections (TORCH, UTIs, etc.)

Maternal medical conditions (diabetes, hypertension, thyroid disease, etc.)

Medications, substance use, or radiation exposure

Maternal blood group and Rh status

2. Intrapartum History

Gestational age at birth

Mode of delivery (vaginal, C-section, assisted delivery)

Indication for C-section or assisted delivery

Duration of labor and any complications (e.g., fetal distress, meconium-stained liquor)

APGAR scores at 1 and 5 minutes

Birth weight, length, and head circumference

3. Immediate Postnatal History

Need for resuscitation (bag-mask ventilation, intubation, chest compressions, etc.)

NICU admission and reason

Early feeding initiation (breastfeeding or formula)

Temperature regulation and blood glucose status

4. Neonatal Course

Respiratory distress, jaundice, or sepsis concerns

Hypoglycemia, hypothermia, or birth injuries

Congenital anomalies (cardiac, craniofacial, limb, etc.)

Screening tests (newborn metabolic screen, hearing, congenital heart disease)

Vaccinations given (BCG, Hepatitis B, OPV)

5. Family and Social History

Family history of genetic or metabolic disorders

Consanguinity

Sibling health status and any neonatal deaths

Socioeconomic status and home environment
